

VIDEO RECORDING AND PRODUCTION SYSTEM

ABSTRACT OF THE DISCLOSURE

A system for recording, storing, manipulating, retrieving and displaying video images of events. The system has the capability of accepting video and audio input from a number of sources, processing and storing the input in the digital format, and combining it with previously captured material for the production on demand of video tapes or other media. Manual controls and automated sensors govern the video collection process. Remote monitoring and control is accomplished through networks or modem connections.
